SOCIO-ECONOMY

Social economics is primarily concerned with the interplay between social processes and economic activity within a society. Social economics may attempt to explain how a particular social group or socioeconomic class behaves within a society, including their actions as consumers.

SOCIAL IMPACT ASSESSMENT

Social Impact Assessment is essential in every research and study nowadays. It is crucial to investigate the social impact among the citizen in project's area. Purposely to determine the impact of the projects carried out. Therefore, we provide proficient officers in collecting data and conducting surveys for the social impact assessment.

CONSULTANCY SERVICES

CONSTRUCTIONS

NRI Holdings Sdn. Bhd. contribute to the creation of infrastructure that best meets the unique demands of its environment. We provides construction engineers as they are problem solvers and able to understand infrastructure life cycles. When compared and contrasted to design engineers, construction engineers bring to the table their own unique perspectives for solving technical challenges with clarity and imagination.

This career path should certainly have a strong understanding of mathematics and science, many other skills are also highly desirable, including critical and analytical thinking, time management, people management and good communication skills. They are required to plan construction activities, supervise the installation of structural elements and inspect the building upon completion. Construction Engineers work with architects and Engineering technicians on building design and on-site problem solving. Construction Engineers also compile reports which detail the cost feasibility and estimation of the project.

TRAFFIC CONSULTANT

Traffic consultancy has becoming more prominent to today's develop country. Nowadays traffic study is significant in many constructions and development projects. A traffic study is an elaborate investigation and meticulous analysis of the transportation system in a specific area, which is supported by an expansive collection of data. Usually, traffic studies are used to examine a recurring transportation problem and propose a solution that will yield less traffic and congestion in that particular area.

Traffic studies play a very important role in the overall functionality of our towns and roadways. With the right team of traffic engineers, the results of a traffic study can help engineers construct different solutions for roadway design and traffic control

The Traffic Engineers are also responsible to perform all tasks associated with traffic management for works, events or emergencies accordance to the relevant statutory and regulatory requirement.

Our Experience :
