Environmental study is a crucial part in pre-construction to ensure sustainability and viability in order to maintain an ecological balance.

SOCIO-ECONOMY

Social economics is primarily concerned with the interplay between social processes and economic activity within a society. Social economics may attempt to explain how a particular social group or socioeconomic class behaves within a society, including their actions as consumers.

SOCIAL IMPACT ASSESSMENT

Social Impact Assessment is essential in every research and study nowadays. It is crucial to investigate the social impact among the citizen in project's area. Purposely to determine the impact of the projects carried out. Therefore, we provide proficient officers in collecting data and conducting surveys for the social impact assessment.

CONSULTANCY SERVICES

CIVIL & STRUCTURAL

NRI Holdings Sdn. Bhd. contributes to the creation of infrastructure that best meets the unique demands of its environment. We provides civil & structural engineers as they are problem solvers and have a high understanding of infrastructure life cycles.

Our team certainly have a strong understanding in this field and highly skilled in critical and analytical thinking, time management, people management and excellent in communication. We are professionals in planning for construction projects, supervise the installation of structural elements and inspect the building upon completion. Our C&S team usually collaborate with architects and engineers on building design and on-site problem solving. C&S team also compile reports which detail the cost feasibility and estimation of the project.

TRAFFIC CONSULTANT

Traffic consultancy has becoming more prominent in today's projects requirement. Traffic study is significant in constructions and in development of projects. Traffic study is an elaborate investigation and meticulous analysis of the transportation system in a specific area, which is supported by an expansive collection of data. Usually, traffic studies are used to examine a recurring transportation problem and propose a solution that will yield less traffic and congestion in that particular area.

Traffic studies play a very important role in the overall functionality of our towns and roadways. With the right team of traffic engineers, the results of a traffic study can help engineers construct different solutions for roadway design and traffic control

The Traffic Engineers are also responsible to perform all tasks associated with traffic management for works, events or emergencies accordance to the relevant statutory and regulatory requirement.
